

## Hydro-Mechanical Bridge Plug

Product Development Group's Hydro-Mechanical Bridge Plug is hydraulically actuated and mechanically set. Compact, with a small OD, this tool can withstand high pressure and is designed for easy drill-out. It can be used for Zonal Isolation, squeeze cement operations, fracturing and plug and abandonment, both temporary and permanent.

### Features & Benefits

- *The setting mechanism and control are contained in the bridge plug, eliminating the need for a complex mechanical setting tool*
- *Eliminates the expense of a wireline setting tool and equipment*
- *Full tubing bore is available for unobstructed fluid flow and wireline runs with perforating and logging equipment, after the plug is set and tubing released*
- *Can be run and set in tandem with retrievable production packers or squeeze packers.*
- *Tools can be configured for any casing grade*
